CH7038A White \$699

CHAIRS

Specialty Seating

Tech Stool

The Boomerang arm and Stool offer maximum versatility via multiple adjustment ranges.

The Tech stool has a height range of 550 - 730mm, measured from the floor to the base of the seat.

Other height ranges can be achieved by altering the gas lift.

The swing-round backrest can be rotated 360 degrees around the seat. It includes a ratchet system which allows the backrest to be moved across the seat, enabling the user to use it as a forward rest as well.

This arm can be retro fitted to most existing seating.

CH9928 Arm **\$249**
CH4005 Stool **\$199**
CH7020 Ring & Gas **\$164**

CH4028C
Complete as pictured \$612

SUPPORT SYSTEMS

Monitor Arms and Laptop Holders

Evo LCD Monitor Arm

Unique features include a clever quick-install mechanism which allows monitors to quickly and securely snap into position; a desk clamp mount which can be reconfigured for thru-desk mounting; and integrated cable management to reduce workspace clutter.

Effortless hand control for optimum positioning.

WT6604 **\$452**

Evo Notebook Holder

Add a notebook holder. Expandable to fit most sizes.

NOTE:

Monitor Arm not included requires EVO 5545 LCD Arm

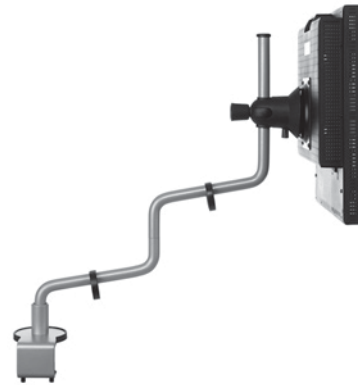

WT6606 **\$119**

Pro Motion Arm

Pro Motion uses a Geometric Spring System (GSS) to provide the greatest range of articulation of all 'dynamic' monitor arms and a movement that is the smoothest and lightest available for easy screen adjustability.

WT6621 **\$299**

Rodney LCD Monitor Arm

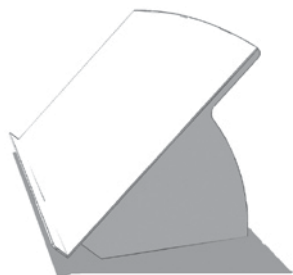

This 'all in one box' solution includes a desk clamp and cable management facility with no need for a separate arm and post. Rodney is also environmentally friendly, using less material and packaging.

WT6622 **\$199**

ERGONOMICS

HEALTH & SAFETY

The core ideals surrounding the 2interface.com range of products are firmly entrenched in basic ergonomic principles. Fundamentally, these revolve around the concept of the human centred design and fitting the task to the person.

These principles are reinforced by Health & Safety in Employment legislation and the legal obligation of employers to shield their staff from risk of injury.

What is not widely recognised is the alarming increase in computer operators experiencing discomfort as the result of non compliant workstations and poor work habits.

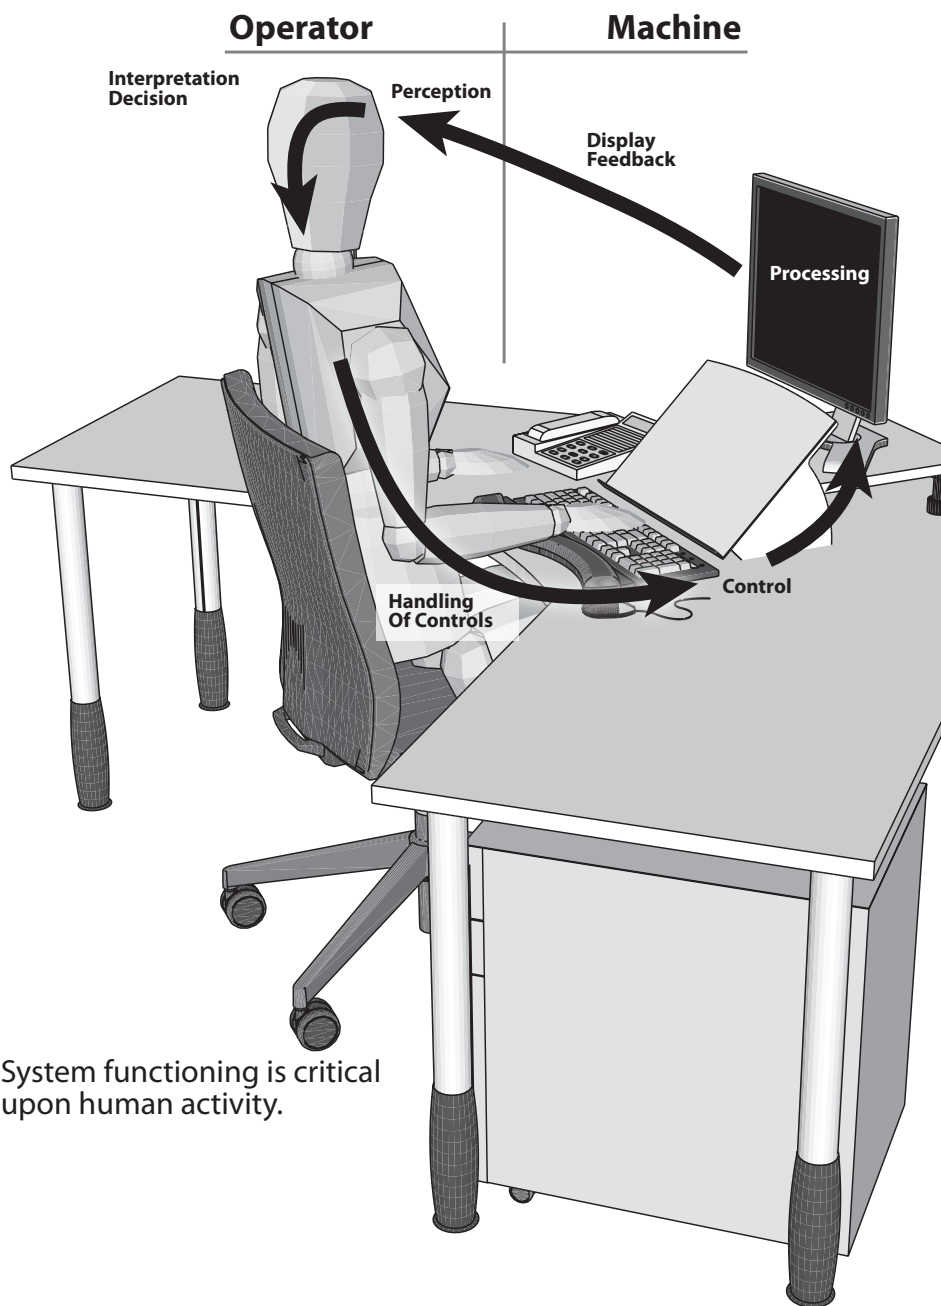

Recommended reading:

Guidelines to using Computers

Preventing and managing discomfort, pain and injury.

www.osh.dol.govt.nz

Human-Machine System

System functioning is critical upon human activity.

WORKSTATION PRINCIPLES

Set up your workstation to allow easy access to primary tools and resources, avoiding unusual body postures. Sounds simple and logical...but is not very commonly followed.

Identify primary tools and resources (i.e. things you would use at least once an hour)

- Keyboard
- Mouse
- Phone
- Working files, documents
- In / out trays

Primary tools and resources should be positioned within the reach envelope. All documents should be placed onto the document holder when working with them.

Micro pause, 10 seconds every 3 - 5 minutes.
Rest break once an hour (get out of your chair).

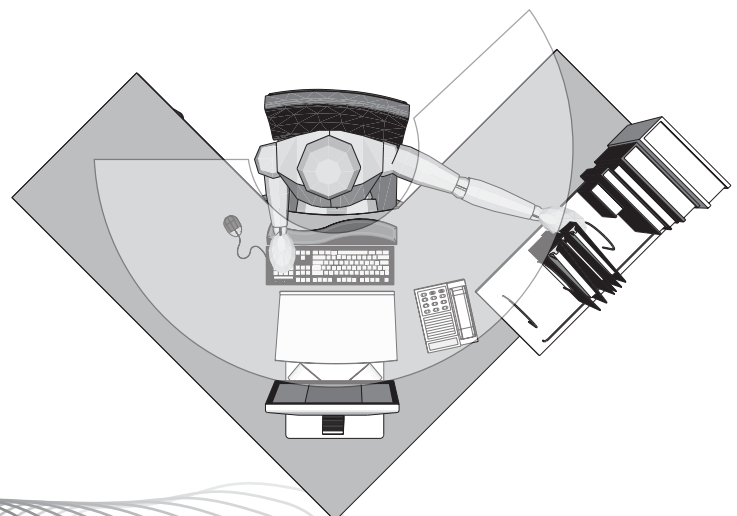

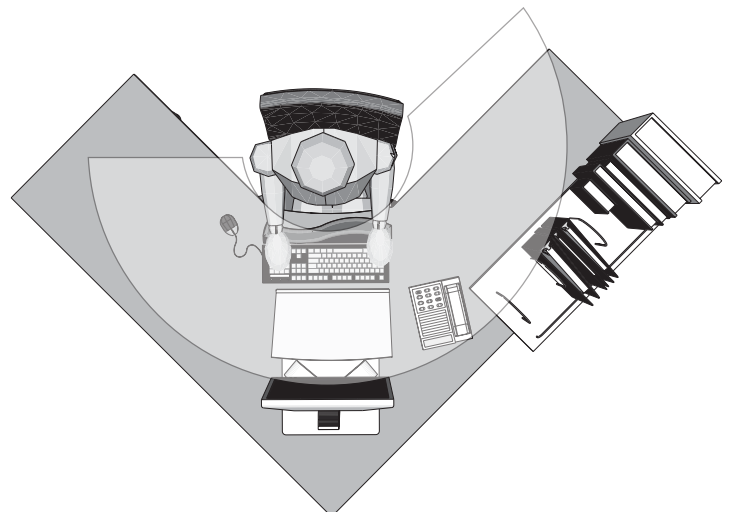

Identify secondary tools and resources (i.e. things you would use once a day).

- Phone books
- Printer
- Hard drive
- Resource folders
- CD drive
- Calculator

Identify other tools and resources (i.e. things you would share in a work group).

- Scanner
- Fax machine
- Central printer
- Photocopier
- Filing cabinets
- Stationery

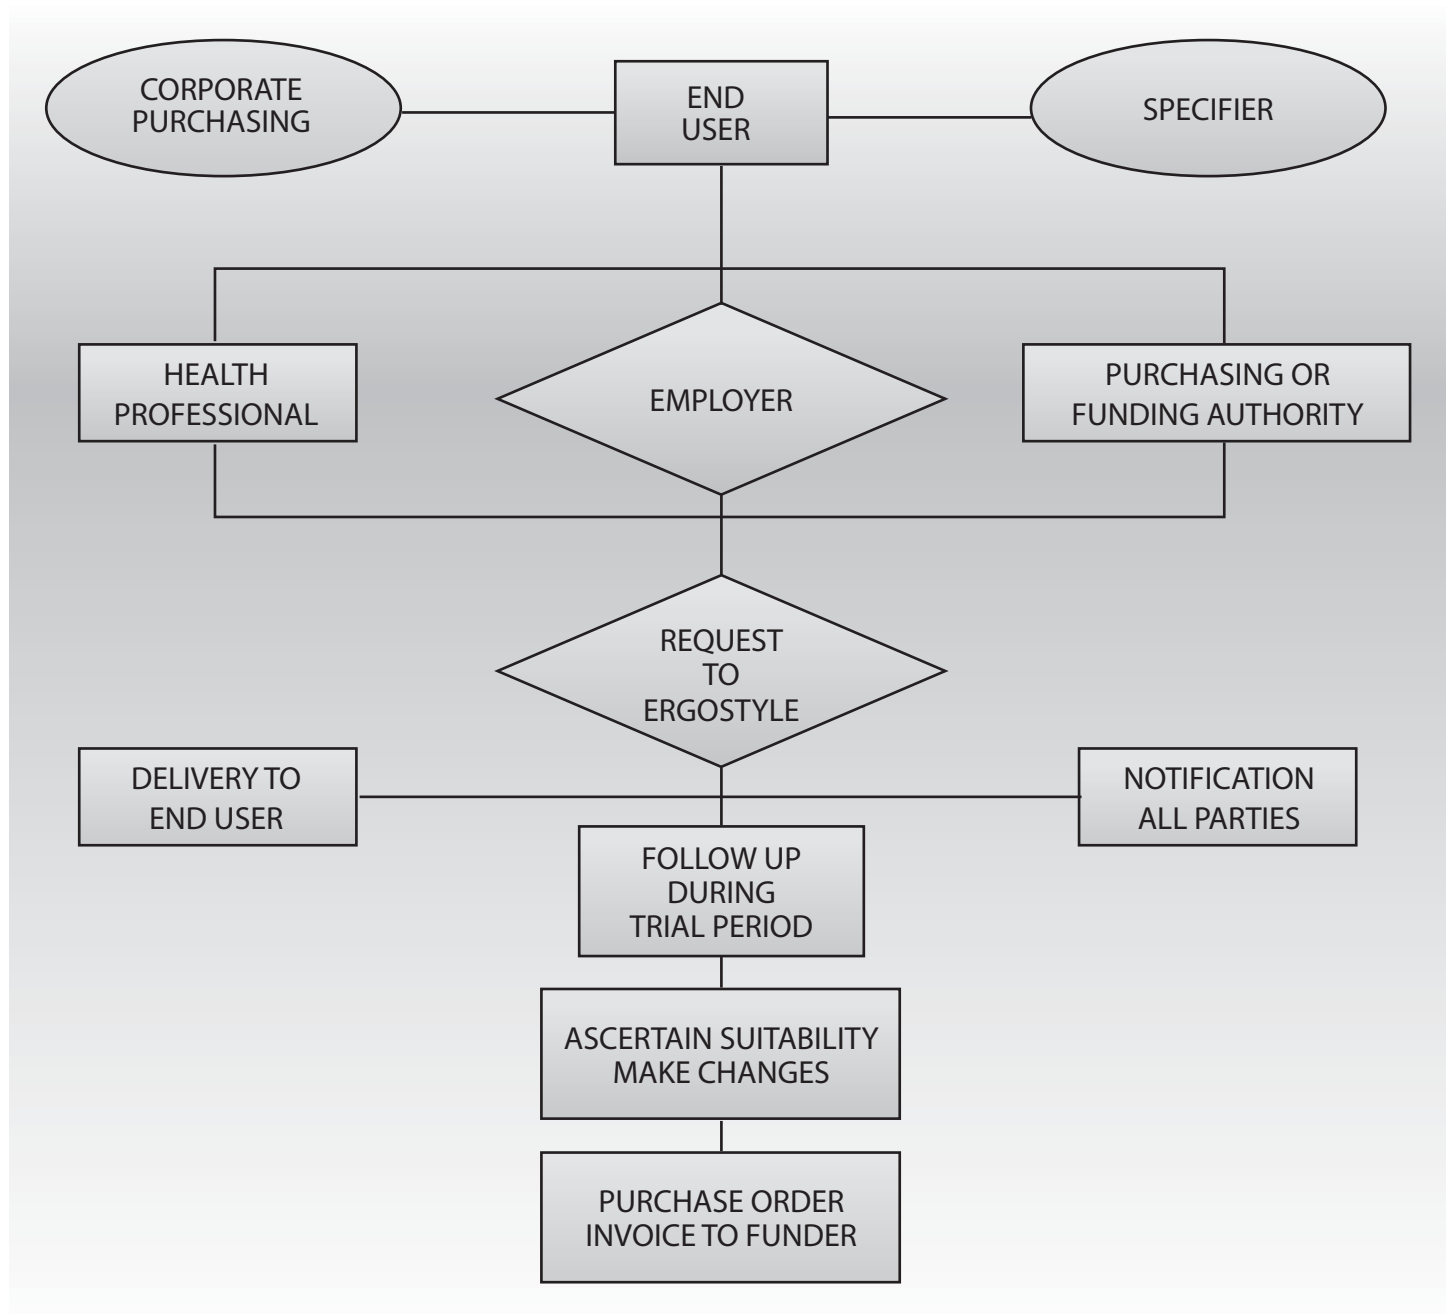

Secondary and other tools should not encroach the reach envelope.

TRIAL REQUEST SYSTEM

In the interests of establishing suitability and proving an outcome, Ergostyle is happy to arrange a user trial of our products in most circumstances.

New product is used in most cases & where possible end user training is provided at time of installation. Whilst this is a free service, a freight cost contribution may be sought in the event of an unsuccessful trial.
